Aims & Scope:

Popular and professional interest in vertebrate paleobiology and paleoanthropology has burgeoned in the past thirty years. Groups such as the Society of Vertebrate Paleontology, the European Society for the Study of Human Evolution and the Paleoanthropology Society have seen dramatic rises in membership and meeting attendance, and papers and symposia on various aspects of both topics are increasingly common at professional meetings of related disciplines (e.g., American Association of Biological Anthropologists, American and International Quaternary Studies Associations, Society for American Archaeology, Society for the Study of Evolution, and Society for the Study of Mammalian Evolution).

Although journals such as *Journal of Human Evolution* and *Journal of Vertebrate Paleontology* may issue monographs (requiring financial support) or special issues with a topical focus (and the online *PaleoAnthropology* holds much promise), there is no consistent outlet for premier monographs and collections in book format in either of these sister disciplines. This series will fill the gap by publishing books of the highest quality in these and related areas.

Focal topics for volumes in the series will include systematic paleontology of all vertebrates (from agnathans to humans), phylogeny reconstruction, functional morphology, Paleolithic archaeology, taphonomy, geochronology, historical biogeography, and biostratigraphy. Other fields (e.g., paleoclimatology, paleoecology, ancient DNA, total organismal community structure) may be considered if the volume theme emphasizes paleobiology (or archaeology). Fields such as modelling of physical processes, genetic methodology, nonvertebrates, or neontology are out of our scope.

Volumes in the series may either be written by a single author (or small group of co-authors) or edited collections. Edited volumes will explore problem-oriented issues in appropriate fields, with multidisciplinary coverage where possible. Unpublished but fully revised dissertations may also be suitable for inclusion. Generally inappropriate for this series are preliminary site reports or Festschrift-style compendia, unless the intended volume revolves around a consistent, scientifically important topic. Each book is expected to provide an up-to-the-minute account of current research on a given topic. The Series Editors are assisted by an Editorial Advisory Board (see above). All contributions in the series will be peer-reviewed by at least 3 readers, at the level of a journal submission. Volumes will be published in large format with high attention to illustration quality and wide distribution.

Proposals for volumes should include a table of contents, outline of the work, a several page summary if a monograph or a list of contributors, titles (and abstracts if possible) for an edited collection, plus the CVs of editors or authors. These should be sent directly to a series editor at the address listed below.
